Kedah, Malaysia · https://github.com/shinegun

## Summary

Co-founded a Shariah-compliant algorithmic trading platform in Python and shipped full stack products with Next.js, Supabase and PostgreSQL. Built a self-hosted AI agent orchestration platform with typed tools and a bounded tool-calling loop.

## Skills

**Languages**: Python · TypeScript · JavaScript · C++ · C · SQL
**Backend & APIs**: Node.js · FastAPI · REST APIs · PostgreSQL · Supabase · Docker
**AI & Development**: AI-assisted Development / LLMs · Agent Orchestration · Function Calling / Tool Use · Prompt Engineering · Git · Linux

## Experience

**Co-founder** Kedah, Malaysia
**Shariah Algo Trading | shariahtrading.my** Jun 2026 – Present

- Co-developed a Shariah-compliant algorithmic trading platform in Python, with data processing pipelines and low-latency execution logic
- Employed AI-assisted development workflows and LLMs to prototype features, optimize performance and speed up web deployment

**Perception Team Member** University Park, Pennsylvania
**Penn State Advanced Vehicle Team** Aug 2025 – May 2026

- Built analytical scoring systems that validated CAN message integrity for reliable, low-latency data flow to the autonomy stack
- Programmed radar-based perception modules in ROS/ROS2 and deployed them to the vehicle's onboard Linux computer

**Student Manager** University Park, Pennsylvania
**The Pennsylvania State University** Sep 2022 – May 2026

- Supervised front-of-house operations for a facility serving over 800 customers daily with 100% compliance with food safety protocols
- Named Employee of the Month twice with a raise each time, recognized among a 100-200 person facility staff

## Education

**The Pennsylvania State University, College of Engineering**
**B.S., Computer Science** May 2026
Minor in Cybersecurity Computational Foundations. Carried daily Japanese language coursework alongside the degree. Languages: English (Bilingual), Malay (Native Language), Japanese (Limited Working Proficiency).

## Certifications

Young Talent Program (YTP) Scholarship - MARA (July 2021)

## Projects

**Nightshift** track.safastack.com
Creator (personal project)
TypeScript · Node.js · React · Hono · SQLite · Server-Sent Events · Vite · Playwright · Function Calling / Tool Use · Agent Orchestration · Prompt Engineering · LLM APIs (OpenAI-compatible) · Stripe API · X API · Vercel · systemd · Cloudflare Tunnel

- Built a self-hosted AI agent orchestration platform with a bounded tool-calling loop, step budgets and 21 typed tools
- Developed full stack solo across Node/Hono with SSE, React and SQLite, plus per-call cost tracking and a daily spend cap

**PolitikKu** politikku.my
Contributor (52 commits, PRN Melaka election site and its backend)
Python · JavaScript · GitHub Actions · Cloudflare Workers · Cloudflare D1 · Cloudflare R2 · Hosted model API (TypeSafe Jev) · ILMU (YTL AI Labs)

- Configured Worker secrets, R2 storage and a read-only database login for the site's Cloudflare backend
- Restored the failed daily run by replacing a rejected database secret in GitHub Actions

**Social Nutrition Architecture**
Co-developer (HackPSU)
Machine Learning · Browser Extension · Prompt Engineering

- Co-developed an AI-driven browser extension that runs machine learning models to detect and flag AI-generated misinformation across social media feeds
- Optimized system and task prompts within tight context windows to evaluate feed data integrity and output real-time, user-facing "nutrition labels"
